Vitamale®

Improves sperm parameters

This dietary supplement is composed from the element essential for the normal activity of male reproduction system. Results are achieved after three months of consumption

Vitamale®

Importance of the compound in the mixture:

Vitamin A: essential for the normal structure and function of spermatozoa and sperm-producing cells.

Vitamin B6: play a role in the metabolism of amino acid-components of proteins.

Vitamin B12: essential for the normal production of genetic material in spermatozoa and involves in activity of folic acid. Improve both sperm count and motility.

Vitamin C: antioxidant, protect from oxidation and damage of spermatozoa and epithelia in production system.

Vitamin E: essential for the normal structure of cells, antioxidant and anti-aging factor.

Folic acid: essential for the normal production of genetic material in spermatozoa and involves in the activity of vitamins B6 & B12.

Amino acids: components of proteins, essential for sperm production.

Zinc: is critical in male reproduction, required for normal cell division.

Selenium: Improve both sperm count, involves in the activity of vitamin E.
